SHADE TREES — OUR SPECIALTY . . .

ALL TREES 2" cal. and up, WIRE BALLED for extra support and to facilitate handling.

LOBLOLLY PINE—*pinus taeda*—We've been transplanting pines in ever increasing numbers since 1948 and we know what they can do for you. They are in great demand for cold protection for azaleas and camellias. Pines are a large volume item—no customer thinks of planting one pine tree—it's always five, ten, twenty or more.

The pines we have to offer are growing in well prepared soil—they have been cultivated, fertilized, and root pruned. In our soil type, Loblolly Pines naturally develop a fine fibrous root system. After root pruning it almost equals that of Wax Ligustrum.

PRICES B & B, Also wired where indicated.

CAMELLIA JAPONICA:

We have a nice lot of medium to large (3'-6') specimen camellias for special landscape needs. It's difficult to present these plants in a list of this kind because it's almost a matter of individual pricing.

CAMELLIA SASANQUA:

The only variety we can offer in quantity is *Mine-no-yuki*. We can, however, take care of small wholesale orders for other varieties.

Mine-no-yuki—Snow on the Mountain — Double white.

3 gal.—18"-24"	2.00

24"-30"	1.75	4'-5'	4.00
30"-36"	2.25	5'-6'	6.00

ILEX VOMITORIA CASSINA:

One of our best landscape plants and is not used nearly enough. Cassina is tough, pretty and versatile. It has no insect or disease problems—is cold hardy and when established is very drought resistant. It tolerates heavy shearing and makes one of the best hedge plants. We are growing three strains for different uses.

Tall Columna—For high foundation, tall screen and specimen use.

Medium Bushy—For general foundation and hedge use.

Prices above two—

24"-30"	1.75	3'-4'	3.00
30"-36"	2.25	4'-5'	5.00

Medium Dwarf—For medium and low foundation and hedge use. Same general habit of growth as the Japanese Hollies.

18"-20"	1.75	20"-24"	2.25
24"-30"			3.00

JASMINUM FLORIDUM AND NUDIFLORUM:
